

## Executive Summary

---

TeamExpand helps software engineering organizations improve visibility across individual and team-level performance when using MS Visual Studio Team System (VSTS) and Team Foundation Server (TFS). By extending the capabilities of VSTS/TFS and improving their compatibility with other products, TeamExpand creates a powerful working environment for efficient work planning, reporting, and monitoring.

Our mission is to maximize the effectiveness of software development organizations by filling the gaps of Microsoft Visual Studio Team System and enhancing user experience with Team Foundation Server. Offering a TFS time tracking tool TX Chrono, designed to make life easier for developers, architects, product managers and quality assurance engineers, TeamExpand offerings ultimately accelerate release cycles, simplify team collaboration and bring unmatched visibility into software engineering projects.

TX Chrono is a Web-based tool for MS Team Foundation Server (TFS) that allows employees to submit time spent on project work items, while providing the ability to review/approve timesheets. This TFS time tracking tool also enables to run reports on the submitted data and export them to MS Word, Excel, and .CSV. Featuring a set of time reporting capabilities that TFS lacks, TFS Timesheet provides increased productivity of your team.

Founded in 2007, TeamExpand is a subsidiary of Altoros Systems, Inc., a global software delivery acceleration specialist headquartered in Sunnyvale, California, with a software development center in Minsk, Belarus.
